# Full stack developer

**Steamlane** develops Artificial Intelligence (AI) driven cloud applications in customer projects. For example:

- Probabilistic models to predict student success
- Deep neural networks and TensorFlow for both IoT and text analytics
- Anomaly detection and survival models for predictive maintenance

Essential task in our AI projects is to package these algorithms into easy-to-use Web application or service and we are looking for a **Full Stack Developer** for this role.

Depending on your preferences, the role can be tailored to be pure developer job without customer interaction, or if you enjoy working together with customers, that is also an option.

This is excellent opportunity for an experienced Web developer who wants to extend his/her competencies into machine learning and AI.

## Required competencies

- Experience on ASP.NET MVC development
- Willing to gradually learn Artificial Intelligence and Machine Learning technologies

## Other valued competencies

- Microsoft Azure PaaS services
- SQL databases
