Lead Architect

Steamlane develops Artificial Intelligence (AI) driven cloud applications in customer projects. For example:

- Probabilistic models to predict student success
- Deep neural networks and TensorFlow for both IoT and text analytics
- Anomaly detection and survival models for predictive maintenance

Essential task in our AI projects is to package these algorithms into easy-to-use Web application or service and we are looking for a **Lead Architect** to contribute to customer projects and also lead our development team.

This is excellent opportunity for an experienced developer who wants to extend his/her competencies into machine learning, AI and Microsoft Azure.

Role

- Manage our growing development team and ensure its high-quality output
- Define implementation architecture of customer projects
- Pathfinding of new technologies
- Implementation of most challenging parts of customer projects

Required competencies

- Long experience in ASP.NET MVC development, SQL and architecture work
- DevOps
- Managing development team
- Willing to gradually learn Artificial Intelligence and Machine Learning technologies

Other valued competencies

- Microsoft Azure PaaS services
